PCB Layout Engineer

Full time [Beijing](#)

Expires on 2021-08-09

We are expanding our team in China and are looking for highly motivated PCB Layout engineers to work with development of radio base station units. You will work with PCB layout design in maintenance and development projects of products and systems. The position also involves a responsibility to ensuring optimal design for performance, reliability and cost. You should obtain and maintain a wide knowledge of ECAD development environment and methodologies used within our R&D Centers and the global organization.

Responsibilities

- Participate in projects as a resource of electrical layout design
- Secure performance and development time of PCB.
- Document designs in accordance with HWDP (Hardware Development Process).
- Is expected to recommend improvements, such as, but not limited to:
 - Cost reduction of products
 - Improvement of methods and tools for the early design phases.
- Understand manufacturing process of PCB.
- Is expected to drive PCB external and internal reviews in projects.
- Be able to discuss requirements with customers and PCB supplier.
- Follow up new technology development in the PCB area and share it with the team.

Qualifications

- Minimum bachelor degree with a major in electrical engineering is required.
- A minimum of 3 years' experience from analog design and digital PCB design.
- Proven skills in Cadence Allegro for creating layouts.
- A good team player with great communication skill.
- Fluent in English, spoken and written.
- Well organized and creative.
- Result oriented and good ability of initiative.
- Self-motivated with positive personality.

Application
